

I'm not robot!

Inspire Therapy is a small implantable device that delivers a mild electrical stimulation to the tongue to keep the airways open during sleep. This new treatment option is now offered by Dr. Mehta at ENT Surgical Consultants. Read Full Article and Learn More The Following Physicians have been chosen Chicago Magazine Castle Connolly Top Doctors 2022. Dr. Sung Chung, Dr. Scott DiVenere, Dr. Michael Gartlan, and Dr. Ankit Patel. New Physician Brings Advanced Ear Surgeries to Morris Hospital Advanced ear surgeries that are typically performed in university medical center settings are now being done at Morris Hospital. Fellowship trained otolaryngologist Matthew Bartindale, M.D., performs the majority of ear surgeries completely through the ear canal, avoiding an external incision. He joined the Morris Hospital Medical Staff last September. "The ear is amazingly complex and contains some of the smallest structures in the human body," explains Dr. Bartindale. "I do the grand majority of my operations through a 7mm (1/4 inch) speculum, without making any external incisions." Read Full Press Release Welcome Dr. Matthew Bartindale To ENT Surgical Consultants Dr. Matthew Bartindale is an otolaryngologist with a special interest in ear disease, hearing loss, and skull base surgery. He is experienced in minimally invasive ear surgery, where he performs a large proportion of his surgeries completely through the ear canal, avoiding an external incision (and never shaving hair). Dr. Bartindale's additional clinical interests include pediatric ENT, thyroid disease, nose and sinus disease, and snoring and sleep disorders. Dr. Matthew Bartindale's Full Bio With renewed determination, Jerry met with Dr. Matthew Bartindale, a fellowship trained, board-certified otolaryngologist with ENT Surgical Consultants who is on the medical staff at Morris Hospital & Healthcare Centers. After an evaluation, Dr. Bartindale determined that Jerry's hearing loss was severe enough to make him a good candidate for a cochlear implant, a small device that is surgically implanted into the inner ear. Read the Full Story Dr. Rajeev Mehta will be hosting a webinar March 16th, 2022 Dr. Rajeev Mehta will be hosting a webinar about a surgical treatment for Obstructive Sleep Apnea called Inspire Hypoglossal Nerve Stimulator on March 16th at 1:30pm and April 27th at 6pm. Ear inspection Otology is a branch of medicine which studies normal and pathological anatomy and physiology of the ear (hearing and vestibular sensory systems and related structures and functions) as well as their diseases, diagnosis and treatment.[1][2] Otologic surgery generally refers to surgery of the middle ear and mastoid related to chronic otitis media, such as tympanoplasty, or ear drum surgery, ossiculoplasty, or surgery of the hearing bones, and mastoidectomy. Otology also includes surgical treatment of conductive hearing loss, such as stapedectomy surgery for otosclerosis. Neurotology, a related field of medicine and subspecialty of otolaryngology, is the study of diseases of the inner ear, which can lead to hearing and balance disorders. Neurotologic surgery generally refers to surgery of the inner ear or surgery that involves entering the inner ear with risk to the hearing and balance organs, including labyrinthectomy, cochlear implant surgery, and surgery for tumors of the temporal bone, such as intracranial acoustic neuromas. Neurotology is expanded to include surgery of the lateral skull base to treat intracranial tumors related to the ear and surrounding nerve and vascular structures, such as large cerebellar pontine angle acoustic neuromas, glomus jugulare tumors and facial nerve tumors. Some of the concerns of otology include: identifying the underlying mechanisms of Ménière's disease, finding the causes of tinnitus and developing treatment methods, defining the development and progression of otitis media Related concerns of neurotology include: studying signal processing in the cochlear implant patient, investigating postural control areas and vestibulo-ocular mechanisms. studying the genetics of acoustic neuromas in patients with neurofibromatosis, to better understanding how to treat these tumors and prevent their growth.
